Exercise 9. *Deadline: 18 January 2010.*

THE JAVA PROGRAMMING LANGUAGE

A FILE NAVIGATOR

University of Wrocław
Institute of Computer Science *Paweł Rzechonek*

Exercise

Write a simple application, that will allow you to navigate on a local file system in your computer. Your application should be able to:

- show contents of an indicated directory (files and subdirectories);
- allow to change the presented directory;
- copy selected file to another directory (choose the directory using `JFileChooser` class);
- display selected graphical file (*gif*, *jpg*, *png*, etc.) in a modal dialog window.

A list of files and subdirectories (`JList` class) should be placed in the central part of your application.

Requirement

Build your application using Swing components.
