Exercises due on Friday 1st of February 11.15

January 29, 2002

1. **Minimal Propositional Logic**

   Give inhabitants of the following formulae:

   (a) $(A \to B \to C) \to (B \to A \to C)$. (Do not forget that $\to$ is rightassociative)

   (b) $(A \to B \to C) \to ((C \to \bot) \to A \to B \to \bot)$. (You don't need the definition of $\bot$ in this proof)

   (c) $(A \to B \to C) \to (A \to C) \to (B \to C)$.

   (d) $(A \to B \to C) \to (B \to A \to B \to A \to C)$.

2. **Inuitionistic Propositional Logic**

   Give inhabitants of the following formulae, assuming the declarations on the next page:

   (a) $A \vee (B \vee C) \to (A \vee B) \vee C$.

   (b) $A \wedge (B \wedge C) \to (A \wedge B) \wedge C$.

   (c) $\neg(A \vee B) \to (\neg A \wedge \neg B)$.

   (d) $(\neg A \vee \neg B) \to \neg(A \wedge B)$.

3. **Intuitionistic Predicate Logic**

   Give inhabitants of the following formulae:

   (a) $\Pi S{:}\mathrm{Set}\ \Pi s{:}S\ (\mathrm{equal}\ S\ s\ s)$.

   (b) $\Pi S{:}\mathrm{Set}\ \Pi s_1, s_2{:}S\ (\mathrm{equal}\ S\ s_1\ s_2) \to (\mathrm{equal}\ S\ s_2\ s_1)$.

   (c) $\Pi S{:}\mathrm{Set}\ \Pi s_1, s_2, s_3{:}S$
   $(\mathrm{equal}\ S\ s_1\ s_2) \to (\mathrm{equal}\ S\ s_2\ s_3) \to (\mathrm{equal}\ S\ s_1\ s_3)$.

   (d) Assume that the context contains

   $\mathrm{Nat}{:}\mathrm{Set}$
   $0{:}\mathrm{Nat}$
   $S{:}\mathrm{Nat} \to \mathrm{Nat}$
   $P{:}\mathrm{Nat} \to \mathrm{Prop}$

h: Πx: Nat
$\quad (P\ x) \to ((P\ (S\ x)) \to \bot) \to \bot.$

In this context, construct a proof of
Πx: Nat
$\quad (P\ x) \to ((P\ (S\ (S\ x))) \to \bot) \to \bot.$

Remark: The proof will start with λx: Nat $\cdots$ In this context, you will need two instances of h, namely $(h\ x)$ and $(h\ (Sx))$.
